linkedin.com/in/vahid-aliyev-dev

SUMMARY

Software engineer with an M.Sc. in Computer Science who builds and ships complete products, from interface and API design to database, authentication and cloud deployment. Designed, built and deployed 10+ projects end to end, including an AI recruitment platform (master's thesis) and an AI code-review tool, both in production on Vercel and Render. Uses LLMs both inside products (structured outputs, usage limits, failure handling) and in daily engineering work for design, implementation, testing and documentation. A law degree trained me to reason from first principles, structure arguments precisely and catch the details that matter. Fast learner who takes full ownership and prefers simple, maintainable solutions.

EXPERIENCE

Frontend Developer Intern — Aplit
Sep 2026 - Oct 2026 · Remote

- Built product UI features in React and Next.js with TypeScript, from component design to integration with backend REST APIs.
- Developed reusable, responsive components and pages, keeping the codebase consistent and easy to extend.
- Worked in code review and team workflows with Git, turning requirements into shipped features.

Frontend AI Engineer Intern — FlyRank AI
Jul 2026 - Aug 2026 · Remote

- Built AI-powered web features by integrating Large Language Model APIs into full-stack applications.
- Designed prompts that return structured, predictable responses, so the UI could render AI output reliably.
- Connected frontend interfaces to backend AI services through REST APIs and designed clear user flows for AI-driven workflows.

Frontend Developer Intern — Software Village
May 2026 - Jul 2026 · Remote

- Delivered features in a sprint-based Agile/Scrum team using React, Next.js and TypeScript.
- Took part in sprint planning, task estimation and progress reviews with the team.

Frontend Developer Trainee — YUP Technology
May 2024 - Sep 2024 · Baku, Azerbaijan

- Built frontend projects with HTML, CSS, JavaScript, React and Tailwind CSS in a project-based program.
- Practiced Git workflows, responsive design, reusable components and debugging in a collaborative setting.

STARTUP

Let's Speak Law in development
Team project · letsspeaklaw.com

- Building, with a small team, a social platform for law students that combines professional networking with legal content sharing.
- Own product and feature planning, frontend and interface development, and UX and technical decisions for the MVP.
- Shipped the concept and landing page; the core MVP (profiles, feed, connections) is in development.

SELECTED PROJECTS

AI Smart Application System — Master's thesis
Live · Code

React, TypeScript, Node.js, Express, MongoDB Atlas, OpenAI API

- Designed and built, solo and end to end, a recruitment platform where applicants upload CVs and reviewers and managers evaluate them with AI-generated analysis.
- Implemented role-based access for 3 roles with JWT, bcrypt password hashing and authorization middleware on protected API routes.
- Engineered prompts so the LLM returns structured candidate insights instead of free-form text.
- Deployed frontend (Vercel), backend (Render) and database (MongoDB Atlas) as separate services, handling environment config and CORS.

AI Code Review App

Live · Code

React, TypeScript, Node.js, Express, MongoDB, OpenAI API

- Built a developer tool that returns structured AI feedback on submitted code and stores each user's review history.
- Added per-user usage limits (10 free reviews) enforced on the backend, plus error states for AI failures and invalid responses.
- Secured data so users can access only their own reviews.

Real-Time Data Visualization Dashboard — Team project

Live · Code

React, TypeScript, Socket.IO, Recharts, Node.js, Vitest

- Owned the frontend: live charts and KPI cards updated by WebSocket events without polling or page reloads.
- Handled connection lifecycle states and real-time alerts; agreed event names and payload contracts with backend teammates.

More projects (V Stream, Tech Store and others): vahidaliyev.com

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), SQL (basic)
Frontend	React, Next.js, HTML5, CSS3, Tailwind CSS, React Router, Vite, Framer Motion, Recharts
Backend	Node.js, Express.js, REST APIs, Socket.IO (WebSockets), JWT, bcrypt, Firebase Authentication
Data	MongoDB, MongoDB Atlas, Mongoose
AI	OpenAI API, LLM integration, prompt engineering for structured outputs
Testing & tools	Vitest, Supertest, Git, GitHub, Postman, Vercel, Render, Figma

EDUCATION

M.Sc. Computer Science — VIZJA University

2024 - 2026

Warsaw, Poland · Thesis: AI Smart Application System

Bachelor of Laws (LL.B.) — Baku State University

2020 - 2024

Baku, Azerbaijan · Structured reasoning, legal research, precise writing

LANGUAGES

English — professional working proficiency (IELTS, B2)
Turkish — C1
Azerbaijani — native
